Industry Solutions

Power Transmissions

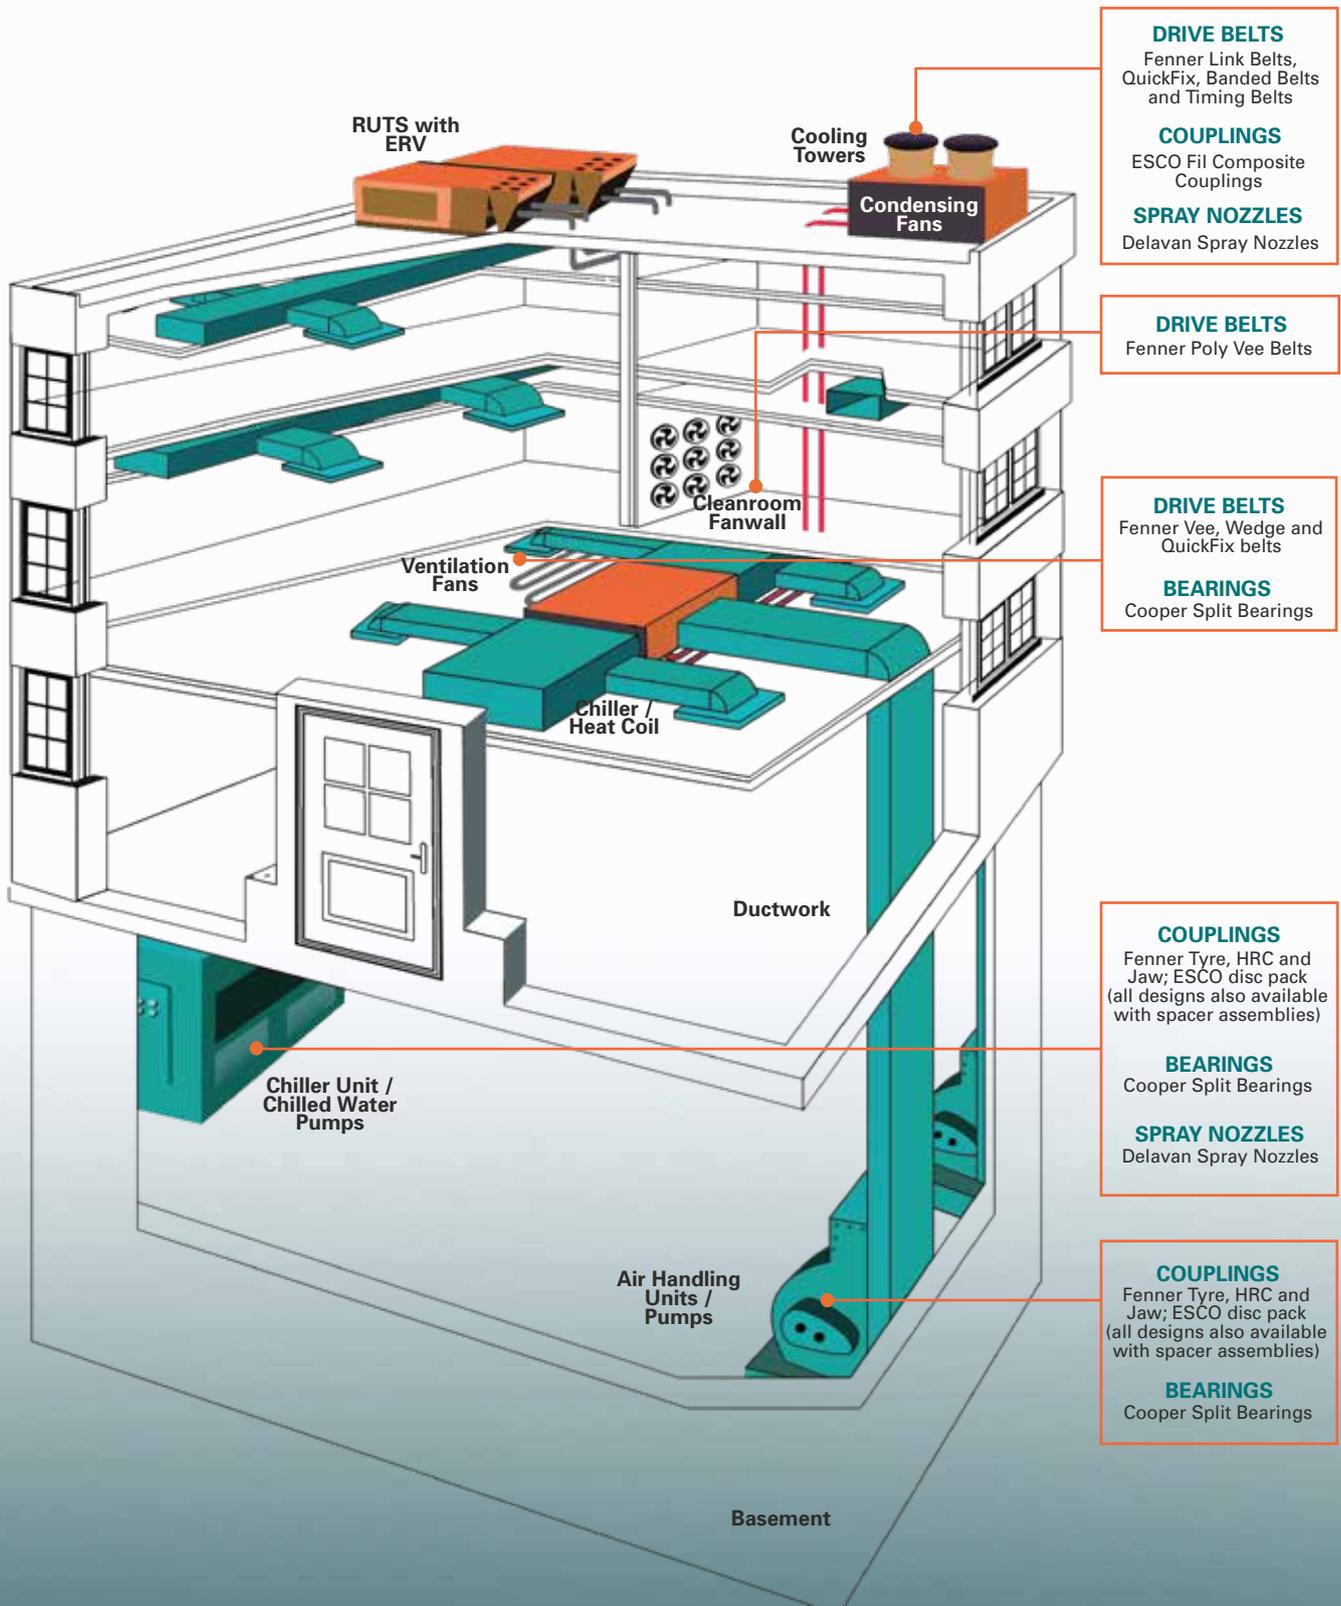

FPT FAR EAST

Heating, Ventilation and Air Conditioning

FPT manages and distributes a comprehensive and extensive range of power transmissions for large commercial, residential, and industrial HVAC maintenance and installations. While HVAC contractors experience rapid growth, it can be difficult to co-ordinate all the needs for large project work during scheduled maintenance and refurbishment cycles. Project planners can rely on FPT as their single point of call for product and technical support for large and small jobs. When training or root cause analysis is required, our Engineered Solutions teams add further value to the contractor business, by providing condition monitoring and in-house training for groups on drive alignment and best preventative maintenance practice.

Couplings

Fenner couplings are designed to absorb shock loadings, accommodate drive misalignment and allow separation of the drive line for maintenance.

Fenner shaft couplings range from highly resilient to rigid and are all precision manufactured using high quality cast iron or steel, and the latest polymer and composite technology.

Belt Drives

Fenner transmission belts and pulleys have an enviable worldwide reputation achieved by consistent performance in the harshest environments.

From high power belt drives in quarries, critical pumps in chemical processing plants, to precise control in scientific equipment Fenner Transmission Belt Drives continue to provide exceptional service.

Built using the highest quality materials, with technically advanced production processes, and backed with rigorous quality procedures, Fenner belts, pulleys and Taper Lock® shaft fixings together form the complete belt drive solution.

Disc

Ensure infinite lifetime while transmitting the highest torque at high misalignment, temperatures, and speed, even in aggressive and dusty atmospheres. Corrosion-free, maintenance-free, and lubrication-free.

EscoFil

Designed for infinite life and built out of advanced composite material that confer unparalleled light weight, high strength, corrosion and ultra-violet resistance to the coupling.

Split Bearings

Split Roller / Split Tapered

The Cooper split tapered bearing is intended for the 'fixed' bearing position of shafts where there are both radial and axial loading and our split roller bearing is unsuitable.

For the Split Roller, Cooper offers four standard bearings series to accommodate a variety of shaft sizes: 100 series, 01/01E series 02/02 series and 03 series.

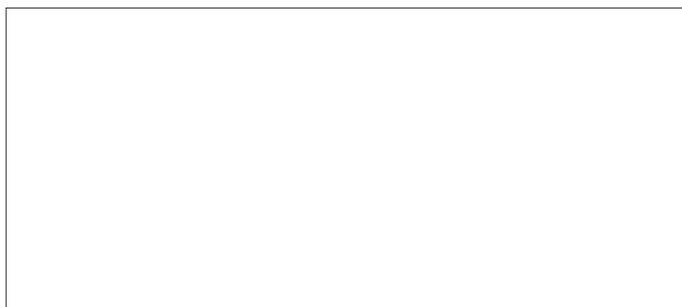

Spray Nozzles

A vast range of spray nozzles with many variations on each basic type. The flexibility and versatility of Delavan is reflected in the range of materials available. Their nozzles are available in any material that can be machined, cast or moulded. Brass, stainless steel and thermoplastics being the most common choices with others including carbon steel, cast iron, gunmetal, lead, graphite, carbides and ceramics. They also supply nozzles for use with corrosive and abrasive liquids, suspensions and in hot and hazardous environments. Nozzles can be designed and manufactured to produce air atomising sprays, flat jet sprays, solid stream sprays and hollow or full cone sprays.

FPT Far East Pte Ltd is a Singapore based company founded in 1989, focused on being a partner of choice for industrial component supply and future sustainability in the Asia Pacific region. A subsidiary of the Inenco Group Australia, the company supplies a wide range of premium products into industrial markets. FPT represents a number of global brands including Fenner power transmissions, Esco couplings, Delavan Spray Technologies and Cooper bearings.
